

## ***GaussViewW* Installation Instructions**

The distribution CD in this package is designed to install *GaussViewW* automatically on supported Windows systems. However, you must install *Gaussian 09W* or the *Gaussian 09W* Utilities before installing *GaussViewW*.

To start the *GaussViewW* installation, insert the CD, and follow the installation directions on the screen. If the installation does not start automatically, you may start it manually selecting **Start=>Run** and then entering **D:\SETUP.EXE** into the resulting dialog (substitute a different drive letter if your CD-ROM drive is not D:).

The default installation directory for GVW is the same as for *Gaussian 09W* or the *G09W* Utilities, typically *C:\G09W*. Using the same directory for both products simplifies GVW's interactions with the *Gaussian 09W* product.

During the installation you will be asked to supply a serial number, which you will find on the enclosed registration card. If your site has purchased a site license for *GVW*, your serial number is coded for multiple installations, and so the same serial number will work on each machine.

Note that *GVW* is designed to work with *G09W*. It will process *G03W* output files, but will work best with *G09W*. If you have *G03W*, contact Gaussian, Inc. for information about upgrading to *G09W*.
